Based on	Common DSW Knowledge Model, 2.7.0 (dsw:root:2.7.0)
Created by	Example research team research@example.org
Generated on	11 Sep 2026

Data Management Plan created in Data Stewardship Wizard «ds-wizard.org»

Contributors

The following contributors are related to the project of this DMP:

- **Example research team**
research@example.org
Roles: Contact Person, Creator of DMP, Data Steward

Projects

We will be working on the following projects and for those are the data and work described in this DMP.

Coastal observations: reproducible data management

Project Number	COAST-2026
Start date	2026-01-01
End date	2027-12-31
Funding	Did not apply for any funding yet.

Synthetic example for evaluating template quality. The project re-uses open observations and documents data management decisions.

Section 1: Data description and collection or re-use of existing data

1. How will new data be collected or produced and/or how will existing data be re-used?

No new instrument datasets will be produced in this project.

Re-used datasets

- **Open coastal observations — station 1**

This reference dataset will be re-used.

Source: <https://example.org/datasets/coastal-observations/station-1/version-2026>

Purpose of re-use

Compare seasonal changes in water temperature.

- Retain the original timestamps.
- Document any excluded observations.

Dataset version to be used

2026.1

If a new version becomes available during the project, the current version will continue to be used.

We will keep the copy of this standard reference data and make it available with our results.

This standard reference data are freely available with obligation to quote the source.

The standard reference data are in the format that does not have to be transformed and we can use it directly.

- **Open coastal observations — station 2**

This reference dataset will be re-used.

Source: <https://example.org/datasets/coastal-observations/station-2/version-2026>

Purpose of re-use

Compare seasonal changes in water temperature.

- Retain the original timestamps.
- Document any excluded observations.

Dataset version to be used

2026.1

If a new version becomes available during the project, the current version will continue to be used.

We will keep the copy of this standard reference data and make it available with our results.

This standard reference data are freely available with obligation to quote the source.

The standard reference data are in the format that does not have to be transformed and we can use it directly.

Provenance

How data provenance will be documented

Record source versions and processing scripts in the project repository.

| Record | Retention | |---|---| | Processing log | 10 years | | Source checksum | 10 years |

2. What data (for example the kinds, formats, and volumes) will be collected or produced?

Re-used datasets

Datasets considered for reuse and actually reused are described in Question 1.

Section 2: Documentation and data quality

3. What metadata and documentation (for example the methodology of data collection and way of organising data) will accompany the data?

List of data to be published is given in Section 5, Question 10 and 11. This also includes information about catalogs where the data can be found. Information about data types used is given in Section 1, Question 2.

4. What data quality control measures will be used?

There will be no instrument dataset in this project.

Section 3: Storage and backup during research process

5. How will data and metadata be stored and backed up during the research process?

There is a shared workspace used during the project for working with data.

Storage needs will be the same during the whole project.

All essential data will also be stored elsewhere to prevent a total loss of data.

We will make automated backups of all data stored outside the workspace.

Information not provided: the locations where data and metadata will be stored and backed up.

Information not provided: how often backups will be performed.

6. How will data security and protection of sensitive data be taken care of during the research?

During the project we will use shared working space to work with our data but we will store all essential data elsewhere. We make (automated) backups of all data stored outside of the working area.

Section 4: Legal and ethical requirements, codes of conduct

7. If personal data are processed, how will compliance with legislation on personal data and on security be ensured?

Data security protection is described in Section 3, Question 6.

8. How will other legal issues, such as intellectual property rights and ownership, be managed? What legislation is applicable?

For the reference and non-reference data sets that we reuse, conditions are as follows:

- Open coastal observations — station 1
It is freely available with obligation to quote the source (e.g. CC-BY).
- Open coastal observations — station 2
It is freely available with obligation to quote the source (e.g. CC-BY).

9. What ethical issues and codes of conduct are there, and how will they be taken into account?

Section 5: Data sharing and long-term preservation

10. How and when will data be shared? Are there possible restrictions to data sharing or embargo reasons?

How the data will be shared

Restrictions on data sharing

Ethical and legal restrictions are documented under Section 4. We have used the Data Stewardship Wizard, which made us aware of options to minimize the restrictions.

11. How will data for preservation be selected, and where will data be preserved long-term (for example a data repository or archive)?

12. What methods or software tools are needed to access and use data?

There are no published data to access or use.

13. How will the application of a unique and persistent identifier (such as a Digital Object Identifier (DOI)) to each data set be ensured?

Ensuring PIDs for published data

Possible re-use of created data in other contexts

Explanation of how the collected or created data might be re-used in other contexts:

Section 6: Data management responsibilities and resources

14. Who (for example role, position, and institution) will be responsible for data management (i.e. the data steward)?

Example research team is responsible for the management and proficiency of data including data processing, data policies, data guidelines, and data availability.

Example research team is responsible for implementing the DMP, and ensuring it is reviewed and revised.

15. What resources (for example financial and time) will be dedicated to data management and ensuring that data will be FAIR (Findable, Accessible, Interoperable, Re-usable)?

Additional specialist expertise is required. Existing staff will receive training.

Planned training

Staff will complete training before data publication.

- Metadata quality checks
- Version control and provenance

We do not require any hardware or software in addition to what is usually available in the institute.

Repository charges are addressed in Question 11.

Following resources will be dedicated to data management and ensuring that data will be FAIR:

- **Coastal observations: reproducible data management - COAST-2026**

- **Data preparation resource 1**

Prepare metadata and validate deposit files.

The amount is 5000 TWD.

This resource is allocated for ensuring findability and supporting management of data.

This cost will be covered as follows: Institutional research funds.

- **Data preparation resource 2**

Prepare metadata and validate deposit files.

The amount is 0 TWD.

This resource is allocated for ensuring findability and supporting management of data.
This cost will be covered as follows: Institutional research funds.
